

Blended Learning

Blended learning provides you with the best of both synchronous and asynchronous learning. Lectures and demos are provided as self-paced eLearning modules, including a voice-over by one of our professional trainers. If you have questions, you have access to a pool of Spotfire instructors to help you during your course. This help can be via email, phone, or webinar. The content further supplemented by an Instructor-led session in the form of a webinar.

Together, these components provide the same quality of training as in our classroom but without the time and expense associated with travel.

Delivery Format

You can access the asynchronous materials as many times as you like within a 30-day window. These include audio-based recorded training, flash-based videos and demos, quizzes and Spotfire exercise files. On the date listed in our online booking system, there is a two-hour synchronous session where we cover topics that need to be done live and to answer your questions. In addition, the course includes interactive forums and the ability to get help from a Spotfire instructor either via email, phone, or webinar.

Our blended training model utilizes five key characteristics. They are: (1) use of scenario-based exercises; (2) integration of objectives with real-world scenarios; (3) early use of the actual software being trained for; (4) access to live mentors and (5) assessments which mimic real-world tasks. This is an ideal way to teach people across large distances without incurring travel and hotel costs, plus it allows you to spread a single course over a period of several days. Even better, students still receive a two-hour live seminar with one of our professional instructors.

In terms of planning your time, you should set aside 7-8 hours to take any of our blended courses, of which 2 hours is live so must be taken at the specified time. When you receive your course access codes, you will also be notified of the timings for the live session.

Benefits

- No travel expenses.
- Prolonged access to the training content, which dramatically increases retention and also helps to generalize concepts.
- Access to an instructor to support your learning for the duration of the course. This helps you learn both the concepts required and how to apply them to your business problems and situations.
- Ability to complete the asynchronous work whenever you want, wherever you want, at your own pace.

Technical Requirements

To access the exercise files, students require Spotfire Professional software installed on their computer, which may be in the form of a trial evaluation. The only other requirement is a web browser and internet connectivity.

Bootcamps

Bootcamp is the name for our extended 8+ week college-style learning. There are tracks for Authors (using Spotfire Professional), Developers and Administrators featuring all the benefits of Blended training, plus extra content and several webinars. Contact spotfireregistrar@tibco.com for details.
