

Reduce SAS Expense and Overhead with TIBCO Spotfire S+®

Compared to SAS, Spotfire S+® software offers organizations the opportunity to reduce costs, speed development of new models and statistical graphics, and simplify prototyping new types of analysis and their integration into business processes.

Save Money:

The total cost of ownership of the Spotfire S+ product is much lower than that of SAS. Lower costs means better returns on the investments made in analytics, and the ability to reach more users. Additionally, by replacing some existing SAS licenses with Spotfire S+ software, organizations can frequently free-up budget for other projects.

Save Time:

Spotfire S+ software enables rapid development and refinement of analyses—up to five times faster than SAS. In addition, the Spotfire S+ product enables users to create graphics, run analyses and manipulate data from the same interface rather than relying on a multitude of different modules, each with a specialized function (and its own license cost). Using a single system means less time moving between interfaces, and less waiting for specialists trained on critical applications.

Save Effort:

Instead of shaping your needs and infrastructure to fit the needs of SAS, imagine an advanced analytics system which integrates smoothly with other enterprise systems. Spotfire S+ software offers standard APIs and integration points which enable it to connect to a wide variety of data sources (including SAS), and output in an array of formats. This ensures that organizations are able to choose complimentary technologies based on the criteria which are important to them, rather than being forced down a path they wouldn't otherwise choose.

AT A GLANCE

Originally developed by Bell Laboratories, the S® programming language was the first language specifically developed for the creation of statistical analyses. Analytic applications can be developed as much as five times faster than with other commercial languages or systems.

FROM PROTOTYPE TO PRODUCTION

- The Spotfire S+ desktop products, TIBCO Spotfire S+ and TIBCO Spotfire Miner™, enable your analysts and developers to quickly model and test analytic applications.
- Pull data from any networked resource and seamlessly deploy to the Spotfire S+Server for everyday production of regularly scheduled reporting or produce answers on demand.

ATTRIBUTES AND CAPABILITIES

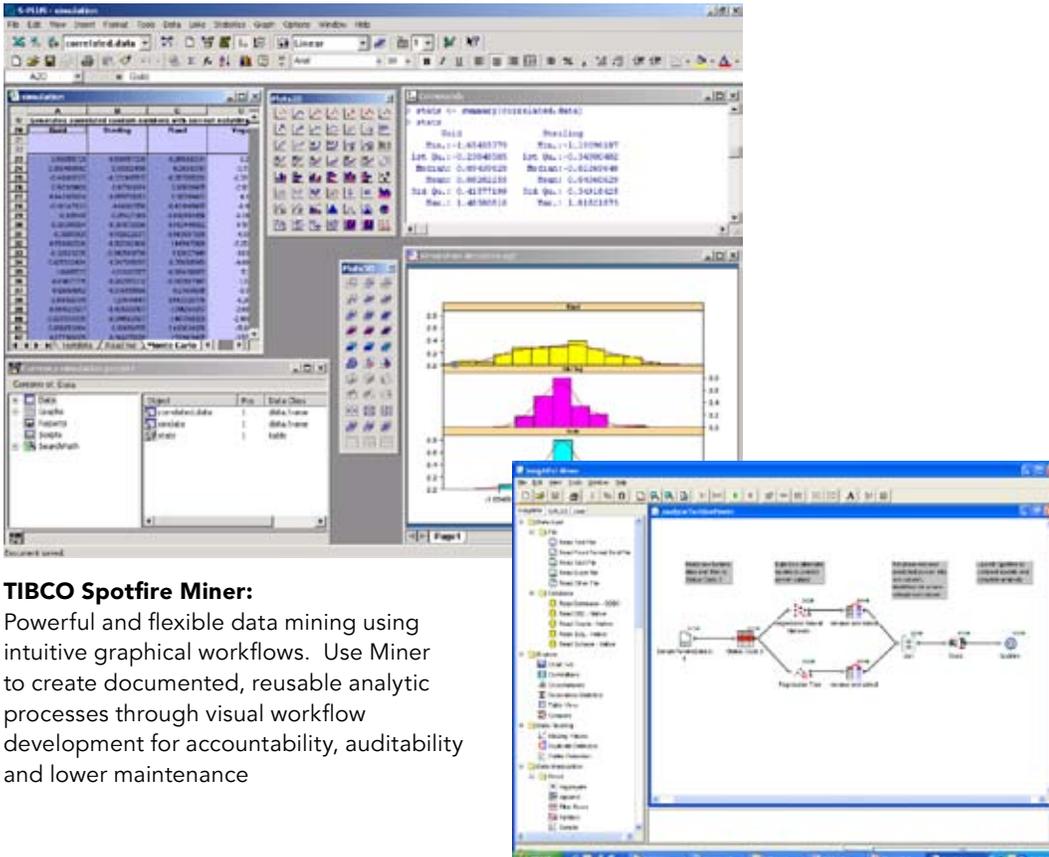

The Spotfire S+ product family provides statisticians and quantitative analysts with a broad array of predictive analytic and cutting-edge statistical analysis tools for powerful and effective data analysis, including statistical graphics that can rapidly convey unique insights into your data

TIBCO Spotfire S+:

Statistical analysis and statistical programming environment for the desktop. Spotfire S+ software enables you to import and transform data from multiple sources including Excel, SAS and databases using powerful and flexible data preparation tools and to rapidly prototype, develop and deploy new analytic applications using a broad array of data analysis and data mining functions.

TIBCO Spotfire S+ Server:

Enterprise deployment and integration of advanced analytics. The Spotfire S+ Server product enables analyses to scale to the largest datasets. Analytics can be integrated into client and web applications using .Net or Java APIs and analysis processes can be scheduled and automated in batch- or SOA-oriented production environments.

TIBCO Spotfire Miner:

Powerful and flexible data mining using intuitive graphical workflows. Use Miner to create documented, reusable analytic processes through visual workflow development for accountability, auditability and lower maintenance

TIBCO Software Inc. (NASDAQ: TIBX) is a leading independent business integration software company and a leading enabler of real-time business, helping companies become more cost-effective, more agile and more efficient. TIBCO has delivered the value of real-time business, what TIBCO calls The Power of Now®, to thousands of customers around the world and in a wide variety of industries.
